

Women Invited to Special Meet 5/21/70 On Cancer Tests

On Monday, May 25, 1970, at 7:30 p. m. in the High School Auditorium all women, 12 years and over are invited to attend a special Cancer Detection Educational Program on Uterine and Breast Cancer. Films will be shown on each subject. A doctor and nurse will be in attendance and ready to answer all questions.

"Medical interest in breast cancer dates back 3000 years. Today's physicians look to surgery, radiation therapy, hormone therapy, etc., for cure" so says Mrs. Florence Nielson, county chairman for the American Cancer Society. She continues, "Despite all efforts to date, the breast cancer death rate remains high. This could change for the better if more women regularly practiced self-examination and consulted their physician at first symptom. Although breast cancer is usually found in women of middle age and over who are the main education target, the Society recommends that efforts also be directed toward educating girls of high school age to a lifetime habit, by showing the Breast Self-Examination film.

In 1937 Uterine cancer was the chief cause of cancer death among American women. Today the death rate toll has been cut by more than 60 percent. The reason for this is the development of the Pap test which can identify uterine cancer before its symptoms appear — a reward of medical research and even improving treatment of cancer patients.

More than 13 million women have seen these films and are grateful for the privilege. Don't be left out of this opportunity to maybe save your life or that of your friend, educate yourself through the efforts of The American Cancer Research programs." Make this meeting a must.

Health Department 5/21/70 Gives Rubella Report

The County Health Department released the final figure of the Rubella Campaign today. 94% of the eligible children have received the immunization. The Health Department thanks the doctors, nurses, volunteers and the parents helped make this campaign such a success in Wasatch.

Alcoholism and Vocational Rehab

According to latest national statistics, there are nearly 100 million persons in the United States today who drink. Of these, approximately seven per cent are classified as alcoholics. Alcoholism, as defined by Dr. Marvin A. Block of the American Medical Association, Committee on Alcoholism, is the "... use of alcohol or alcoholic beverages to the extent of causing any continuing adverse affect upon the individual or his family or his community." Although alcoholism is a progressive, chronic illness, it can be arrested. Moreover, more and more doctors are beginning to recognize it as a sickness with no more moral or immoral connotation than tuberculosis, pneumonia, or schizophrenia.

IN A SURVEY DONE BY the National Highway Safety Council, excessive drinking is blamed for almost fifty percent of the nation's highway deaths. Other studies undertaken by insurance companies point out that a large per cent of accidents, including those at home, on our highways, and in the community are related to drinking. Metropolitan Life Insurance Company reports that alcohol is involved in nearly twenty-five per cent of fire deaths, twenty per cent of accidental home asphyxiations, and twenty per cent of falls from steps or stairs. In a report done by the Kamper Insurance Company, it was determined that "... a company rarely knows the full extent of the excessive costs created by its problem drinkers. For business and industry as a whole, the figure 2 billion dollars (a year) is quoted and regarded as a reasonable estimate of the waste incurred." And, of course, the sorrow and misery of a broken home or marriage is inestimable.

IN UTAH, ACCORDING TO a survey completed by the University of Utah School of Alcohol Studies, alcoholism is involved in thirty-seven percent of welfare cases, sixty-nine percent of prison incarcerations, and fifty-nine percent of mental health problems. Moreover, the same study showed that seventy-eight percent of the problems that authorities have with our Indian population is related to drinking.

Even though the statistics are high and the problems are great, they are not necessarily insurmountable. Utah has had a very effective program in working with alcoholics or potential alcoholics that are interested in

being helped. According to a report done by the Utah Alcoholism Foundation in March of 1968, it was found that during the years that the Foundation has been in operation, over 9,000 Utah citizens, both men and women, have either been rehabilitated or have been prevented from developing into alcoholics. It is estimated by the Foundation that this is a savings to Utah taxpayers of more than \$5,400,000. Utah, in 1947, had an alcoholism rate of 3,952 per 100,000 adult population and ranked 34th in the nation. In 1965, the rate had dropped to 1,988, and the national rank rose to 48th. These declines in Utah's alcoholism rate and rank are important as evidence of the effectiveness of Utah concern and action in regard to alcoholism.

IN THIS STATE, THERE are a number of important programs and agencies working hard toward alleviating alcoholism, to name a few: the Utah Committee on Alcoholism (Salt Lake), Alcoholics Anonymous, the Veterans' Hospital (Salt Lake), Central Utah Center (Provo), the Ogden Alcoholic Rehabilitation Center, the House of Hope (Salt Lake) and the Sevier County Alcoholism Program. In regard to clinics, one of the most important is the University of Utah Medical Center for Alcoholism and Drug Abuse. The Utah State Board of Education, Office of Rehabilitation Services, works very closely with that clinic and others. The Office of Rehabilitation Services can offer several worthwhile suggestions, programs, and other services as a means of helping those with a drinking problem. The Wasatch-Summit County ORS District Office at 13 West Center in Heber City, is familiar with agencies and clinics that are primarily set up to aid or help citizens with this illness. If a resident in either of the two counties is interested in knowing more about the above programs, the local counselor in Heber will be more than happy to talk with them.

30 Apr 1970
After final tally of statistics the County Health Department announces that only 83% of the eligible children were immunized against Rubella. There are 208 children in Wasatch County who did not get the Rubella vaccine. It will be given for the LAST TIME at state cost at our regular immunization clinic this Friday, May 1st. Cost is \$1.00 but no child will be refused. This is for children 1 year of age and under 12.

Remember, no live virus vaccine (polio, smallpox, red measles or mumps) is to be had one month before or after Rubella vaccine.

Please send a note with parents' signature requesting Rubella vaccine with your school child.

The Health Department encourages those 12 years of age and over to obtain the immunization from their private physician.

County Physician, Dr. R. R. Green stated that 95% of the eligible children would have to be immunized in order to RUB OUT RUBELLA in Wasatch Co. Let's make this a successful campaign for Wasatch County.

Fair Grounds Improvement Project Planned

30 Apr 1970
Plans are underway to revamp the Wasatch County Fair Grounds. These were unveiled last week in a meeting held with interested groups, according to Russell Wall, Wasatch County Commissioner in charge of the area.

According to Wall it was agreed that each of the organizations who use the facilities would pool their resources and direct their efforts toward a fund-raising program this year. The funds would be used for a Fairgrounds improvement program.

The plan includes: Realignment and completion of the race track; relocation of the grandstand; relocation of the rodeo arena; renovation of the ice skating area; new rest room facilities; planting of grass, trees and shrubs; construction and location of two more ball diamonds.

It is hoped that this area will become our community park with recreational opportunities for everyone.

This group was hopeful that most of the above improvements will be accomplished in the next two years.

Strawberry

16 Apr 1970

By HACK MILLER
Deseret News Sports Editor

HEBER — The Strawberry Reservoir will be open to fishing again this year.

Owners and controllers of the lake, the Strawberry Waterusers Association has decreed it, agreeing to meet the sanitary requirements as set down by the Utah State Board of Health.

The waterusers met with all interested agencies, including the Wasatch County and State of Utah Boards of Health there Wednesday and agreed to increase sanitation facilities at the lake to take care of the opening-day throng on June 6.

It had been suggested, as a result of department of health surveys, that the lake be closed until such sanitation facilities were provided.

The users assured the state and county health officials that they would have at least one toilet facility per every 100 fishermen who are at the lake.

Dr. Larry Duke, chairman of the Wasatch County health board, conducted the hearing.

Health officials pointed out that certain minimums were presented to the camp operators as far as restaurant and sanitation requirements were concerned and that they would nail a "closed" sign on those camps which did not comply.

The waterusers, represented by Art Finnley, president, said that if the camp owners

didn't meet all requirements they would have their licenses lifted — even for this season.

The Forest Service reported it has its own campground at Bryant's Point — space for about 60 parking spurs. Regular Forest Service user fees will be charged for these and they are separate from the regular campgrounds, operated by the Strawberry Waterusers Association.

Finnley said that the users have lost money on the campground operation each year. They took in about \$5,000 last season. They also collected about \$12,000 in boat fees.

However, he said that with the lease arrangements on the property the users made a 35 per cent profit for the year — and this amounted to about \$12,000.

"Every business is entitled to a profit," he said.

Bureau of Land Management officials reported that the bid for the dam will be opened this fall and that it will take about three years to build the new dam. It will take another four years to bring the water up to where the camps will be moved — that is seven years away.

In the meantime the state health authorities have said that the lake can only be operated as a fishing and recreation place if the waterusers maintain the prescribed standards for health and sanitation.

The meeting was a peaceful one. And that hasn't always been the case with the Straw-

berry rights meetings.

"It is difficult to plan to put into the area any permanent facilities when you know that within a few years all facili-

ties will be gone," Mr. Finnley said.

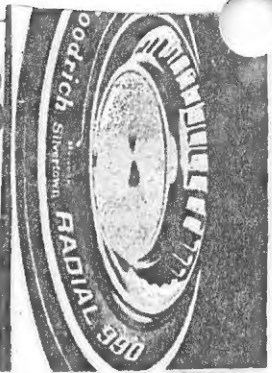

By then, fishing crowds might not be a problem. Fishermen gather only where the

fishing is good. There is no guarantee that the new Strawberry, deeper and larger, will be the attraction that the lake has been as its present size.

Clean Up, Or Close Down!

It's understandable that the Strawberry Waterusers Association, with its control of Utah's most popular fishing place, has been about as popular as a polecat at a picnic.

It has been a continual source of wonderment why the users, impounding Strawberry for water why the users, impounding Strawberry for water lateral grazing, etc.

But they did and there have been some contentions about that for several decades now.

There have been issues regarding the upkeep of the roads, the rights for public fishing, the rights of the state to stock the lake with fish and require people to carry a state license to fish it.

These issues have flared up now and then, and over the years there have been appeasements on both sides.

Wasatch County had a burr under its tail because much of the land in question was on permit, so they say, to Wasatch County people, and was taken from them. The reservoir water was stored for the benefit of Utah County folk. So there were those contentions.

All that is history and some day in the next decade the control of the lake, as far as recreational use and fishing rights are concerned, will be in the hands of one of the government agencies.

But until then the Strawberry Reservoir remains a problem in some ways—mostly the matter of crowds of people with inadequate sanitation facilities.

Health People Investigate

Two years ago Wasatch County organized under state statute its own county health department. The county realized that there were problems of growth.

Midway, the state park, the golf course, increased population with the land a recreation boom, had created a need for controls.

Immediately, one of the problems which confronted Wasatch County was the health hazards at Strawberry Reservoir.

Campers, for instance, who were charged a fee, resented the lack of sanitation, camping facilities, etc.—which, they contended, their fees should provide.

For many years there has been disgruntlements. And like the spokesman for the State Board of Health said Wednesday, when 16 parties from many sides of the issue met at Heber, "never in state health history have we received so much mail about any conditions as we have about Strawberry Reservoir. It has become alarming."

Here at this newspaper we've heard 'em too. We've seen filthy conditions, at some camps and generally around the lake, that should have brought the health people to close the lake to the public years ago.

Right now someone is going to get tough. It's part of the move to improve our environment.

Clean Up Strawberry

Now that the "fat is in the fire" I would like to express my opinion on the pollution of Strawberry Valley. I agree 100 per cent that the Strawberry Water Users haven't maintained facilities to accommodate the fishing public. Seems as though they just had their hand out for all the money they could grab. But it isn't a one-sided problem.

We have owned a summer home in Strawberry for as many years as there have been camps there and believe me, the cabin owners have got to wake up to the fact that they are going to be buried in their own garbage if they don't clean up.

I realize that most of the cabins are small and a place for fishermen to relax and enjoy it, but a can of paint and some good spray would improve the whole area. I have seen fishermen and their families leaving Strawberry dump their garbage in a paper sack alongside the road when there is a garbage dump (maintained by the Water Users) close by.

Strawberry Valley is a beautiful place to spend the summer months, and if we all put forth just a little effort, it will stay that way. Inasmuch as the Strawberry Water Users have agreed to do their part, I think all the cabin owners and public should cooperate.

Here at this newspaper we've heard 'em too. We've seen filthy conditions, at some camps and generally around the lake, that should have brought the health people to close the lake to the public years ago.

Right now someone is going to get tough. It's part of the move to improve our environment.

Will Lift The License

Dr. Larry Duke, chairman of the Wasatch County Board of Health, says his board is determined that there will be adequate sanitation facilities at the lake, on the basis of one facility for each 100 persons, or the camps will be closed.

Camps, according to Duke, have been told to meet certain minimums. This they will have to do, or on the spot their licenses from Wasatch County will be lifted.

There will be an inspection of all facilities at the lake by all parties, including state and county health authorities, two weeks prior to the opening of the season. If the camps are not ready to operate within the standards set, which includes some specifications, they will be closed.

This puts the monkey on the waterusers' backs and they indicated they are willing to do all they have been asked to do—including the rental of portable toilet facilities to take care of the peak crowds.

A 35 Per Cent Profit

The waterusers have been taking 35 per cent profit of the recreational side of the lake—putting only 65 per cent of it back.

The public would argue that this is too much take-home money when the filthy conditions remain around the rim of the resource.

If the health departments close the lake the users lose that handsome profit.

At the Wednesday meeting the edicts about sanitation minimums were given. All understood them. And they were offered, and accepted, in the spirit of cooperation. Everyone wants to keep the

See MILLER on Page A-3

MILLER COLUMN

Continued From Page A-1

fisheries open to the public. It is toward this end that all will strive.

The public will be expected to abide by all rules and will be policed greater than ever before.

And if the public doesn't do its part, it will take only one sign to close the lake to fishing, held by one nail, on just one post!

Strawberry Picture Brightens

By HACK MILLER

Deseret News Sports Editor

HEBER — The Strawberry Reservoir will be open to fishing again this year.

Owners and controllers of the lake, the Strawberry Waterusers Association has decreed it, agreeing to meet the sanitary requirements as set down by the Utah State Board of Health.

The waterusers met with all interested agencies, including the Wasatch County and State of Utah Boards of Health there Wednesday and agreed to increase sanitation facilities at the lake to take care of the opening-day throng on June 6.

It had been suggested, as a result of department of health surveys, that the lake be closed until such sanitation facilities were provided.

The users assured the state and county health officials that they would have at least one toilet facility per every 100 fishermen who are at the lake.

Dr. Larry Duke, chairman of the Wasatch County health board, conducted the hearing.

Health officials pointed out that certain minimums were presented to the camp operators as far as restaurant and sanitation requirements were concerned and that they would nail a "closed" sign on those camps which did not comply.

The waterusers, represented by Art Finnley, president, said that if the camp owners

didn't meet all requirements they would have their licenses lifted — even for this season.

The Forest Service reported it has its own campground at Bryant's Point — space for about 60 parking spurs. Regular Forest Service user fees will be charged for these and they are separate from the regular campgrounds, operated by the Strawberry Waterusers Association.

Finnley said that the users have lost money on the campground operation each year. They took in about \$5,000 last season. They also collected about \$12,000 in boat fees.

However, he said that with the lease arrangements on the property the users made a 35 per cent profit for the year — and this amounted to about \$12,000.

"Every business is entitled to a profit," he said.

Bureau of Land Management officials reported that the bid for the dam will be opened this fall and that it will take about three years to build the new dam. It will take another four years to bring the water up to where the camps will be moved — that is seven years away.

In the meantime the state health authorities have said that the lake can only be operated as a fishing and recreation place if the waterusers maintain the prescribed standards for health and sanitation.

The meeting was a peaceful one. And that hasn't always been the case with the Straw-

berry rights meetings.

"It is difficult to plan to put into the area any permanent facilities when you know that within a few years all facili-

ties will be gone," Mr. Finnley said.

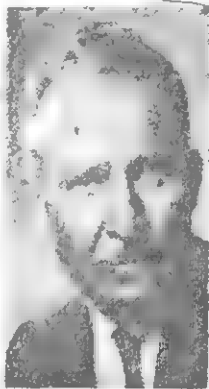

By then, fishing crowds might not be a problem. Fishermen gather only where the

fishing is good. There's no guarantee that the new berry, deeper and larger, will be the attraction that has been as its prede-

Clean Up, Or Close Down!

It's understandable that the Strawberry Waterusers Association, with its control of Utah's most popular fishing place, has been about as popular as a polecat at a picnic.

It has been a continual source of wonderment why the users, impounding Strawberry for water lateral grazing, etc.

But they did and there have been some contentions about that for several decades now.

There have been issues regarding the upkeep of the roads, the rights for public fishing, the rights of the state to stock the lake with fish and require people to carry a state license to fish it.

These issues have flared up now and then, and over the years there have been appeasements on both sides.

Wasatch County had a burr under its tail because much of the land in question was on permit, so they say, to Wasatch County people, and was taken from them. The reservoir water was stored for the benefit of Utah County folk. So there were those contentions.

All that is history and some day in the next decade the control of the lake, as far as recreational use and fishing rights are concerned, will be in the hands of one of the government agencies.

But until then the Strawberry Reservoir remains a problem in some ways—mostly the matter of crowds of people with inadequate sanitation facilities.

Health People Investigate

Two years ago Wasatch County organized under state statute its own county health department. The county realized that there were problems of growth.

Midway, the state park, the golf course, increased population with the land a recreation boom, had created a need for controls.

Immediately, one of the problems which confronted Wasatch County was the health hazards at Strawberry Reservoir.

Campers, for instance, who were charged a fee, resented the lack of sanitation, camping facilities, etc.—which, they contended, their fees should provide.

For many years there has been disgruntlement. And like the spokesman for the State Board of Health said Wednesday, when 16 parties from many sides of the issue met at Heber, "never in state health history have we received so much mail about any conditions as we have about Strawberry Reservoir. It has become alarming."

Here at this newspaper we've heard 'em too. We've seen filthy conditions, at some camps and generally around the lake, that should have brought the health people to close the lake to the public years ago.

Right now someone is going to get tough. It's part of the move to improve our environment.

Clean Up Strawberry

Now that the "fat is in the fire" I would like to express my opinion on the pollution of Strawberry Valley. I agree 100 per cent that the Strawberry Water Users haven't maintained facilities to accommodate the fishing public. Seems as though they just had their hand out for all the money they could grab. But it isn't a one-sided problem.

We have owned a summer home in Strawberry for as many years as there have been camps there and believe me, the cabin owners have got to wake up to the fact that they are going to be buried in their own garbage if they don't clean up.

I realize that most of the cabins are small and a place for fishermen to relax and enjoy it, but a can of paint and some good spray would improve the whole area. I have seen fishermen and their families leaving Strawberry dump their garbage in a paper sack alongside the road when there is a garbage dump (maintained by the Water Users) close by.

Strawberry Valley is a beautiful place to spend the summer months, and if we all put forth just a little effort, it will stay that way. Inasmuch as the Strawberry Water Users have agreed to do their part, I think all the cabin owners and public should cooperate.

Last Rubella Clinic Slated This Friday

After final tally of statistics the County Health Department announces that only 83% of the eligible children were immunized against Rubella. There are 208 children in Wasatch County who did not get the Rubella vaccine. It will be given for the LAST TIME at state cost at our regular immunization clinic this Friday, May 1st. Cost is \$1.00 but no child will be refused. This is for children 1 year of age and under 12.

Remember, no live virus vaccine (polio, smallpox, red measles or mumps) is to be had one month before or after Rubella vaccine.

Please send a note with parents' signature requesting Rubella vaccine with your school child.

The Health Department encourages those 12 years of age and over to obtain the immunization from their private physician.

County Physician, Dr. R. R. Green stated that 95% of the eligible children would have to be immunized in order to RUB OUT RUBELLA in Wasatch Co. Let's make this a successful campaign for Wasatch County.

Last Immunization Clinic Is Friday

The County Health Department announced they have been authorized through the State Health Department to keep 189 doses of Rubella vaccine for those children 1 through 11 who have not yet received it. The vaccine will be on hand at the regular clinic this Friday, May 1st for the cost of \$1.00 (no child will be refused because of the lack of funds). If your child has not yet received the Rubella vaccination send a signed note to school this Friday, or bring your pre-school child to the courthouse 10:30 till 1:00 p. m.

This will be the last regular immunization clinic of the year. The following shots will be available: Tick, Tetanus, Smallpox, Polio, DPT, DT, Typhoid, Red Measles and German Measles (Rubella). All shots are 50c except Rubella which is \$1.00.

Women Invited to Special Meet On Cancer Tests

On Monday, May 25, 1970, at 7:30 p. m. in the High School Auditorium all women, 12 years and over are invited to attend a special Cancer Detection Educational Program on Uterine and Breast Cancer. Films will be shown on each subject. A doctor and nurse will be in attendance and ready to answer all questions.

"Medical interest in breast cancer dates back 3000 years. Today's physicians look to surgery, radiation therapy, hormone therapy, etc., for cure" so says Mrs. Florence Nielson, county chairman for the American Cancer Society. She continues, "Despite all efforts to date, the breast cancer death rate remains high. This could change for the better if more women regularly practiced self-examination and consulted their physician at first symptom. Although breast cancer is usually found in women of middle age and over who are the main education target, the Society recommends that efforts also be directed toward educating girls of high school age to a lifetime habit, by showing the Breast Self-Examination film.

In 1937 Uterine cancer was the chief cause of cancer death among American women. Today the death rate toll has been cut by more than 60 percent. The reason for this is the development of the Pap test which can identify uterine cancer before its symptoms appear — a reward of medical research and even improving treatment of cancer patients.

More than 13 million women have seen these films and are grateful for the privilege. Don't be left out of this opportunity to maybe save your life or that of your friend, educate yourself through the efforts of The American Cancer Research programs." Make this meeting a must.

Health Department Gives Rubella Report

The County Health Department released the final figure of the Rubella Campaign today. 94% of the eligible children have received the immunization. The Health Department thanks the doctors, nurses, volunteers and the parents helped make this campaign such a success in Wasatch.

Alcoholism and Vocational Reh

According to latest national statistics, there are nearly 100 million persons in the United States today who drink. Of these, approximately seven percent are classified as alcoholics. Alcoholism, as defined by Dr. Marvin A. Block of the American Medical Association, Committee on Alcoholism, is the "... use of alcohol or alcoholic beverages to the extent of causing any continuing adverse affect upon the individual or his family or his community." Although alcoholism is a progressive, chronic illness, it can be arrested. Moreover, more and more doctors are beginning to recognize it as a sickness with no more moral or immoral connotation than tuberculosis, pneumonia, or schizophrenia.

IN A SURVEY DONE BY the National Highway Safety Council, excessive drinking is blamed for almost fifty percent of the nation's highway deaths. Other studies undertaken, by insurance companies point out that a large percent of accidents, including those at home, on our highways, and in the community are related to drinking. Metropolitan Life Insurance Company reports that alcohol is involved in nearly twenty-five percent of fire deaths, twenty percent of accidental home asphyxiations, and twenty percent of falls from steps or stairs. In a report done by the Kamper Insurance Company, it was determined that "... a company rarely knows the full extent of the excessive costs created by its problem drinkers. For business and industry as a whole, the figure 2 billion dollars (a year) is quoted and regarded as a reasonable estimate of the waste incurred." And, of course, the sorrow and misery of a broken home or marriage is inestimable.

IN UTAH, ACCORDING TO a survey completed by the University of Utah School of Alcohol Studies, alcoholism is involved in thirty-seven percent of welfare cases, sixty-nine percent of prison incarcerations, and fifty-nine percent of mental health problems. Moreover, the same study showed that seventy-eight percent of the problems that authorities have with our Indian population is related to drinking.

Even though the statistics are high and the problems are great, they are not necessarily insurmountable. Utah has had a very effective program in working with alcoholics or potential alcoholics that are interested in

being helped. report done b holism Founda 1968, it was 1 the years tha has been in op Utah citizens men, have el itated or have from developin It is estimate tion that this Utah taxpayer \$5,400,000. 1,096 Children Vaccinated

Apr 17

The County Health Department reports that 1,096 children were immunized against German Measles in Wasatch County last Friday and Saturday. Appreciation is expressed to Dr. Green, Nurses, PTA ladies and March of Dimes volunteers who helped make the clinics successful. Also thanks to Echomae Anderson of the State Health Department and Elizabeth Ho from Hawaii who is doing post graduate work at the University of Utah.

This Friday, April 17 will be our regular immunization clinic. Rubella vaccine will be given to those children who were unable to have it last weekend. Also the following immunizations will be given: Tetanus, Typhoid, DPT, Tick, Red Measles, Smallpox and Polio. (Red Measles, Smallpox and Polio will NOT be given to those who received the rubella vaccine last week.

Preschool children will be immunized at the Courthouse from 11 a. m. until 1:00 p. m. School children will be taken to the Courthouse by bus.

Each child must bring a sealed envelope containing the correct amount of change with the following information: Name of child; school; grade; teacher; immunization wanted; signature of parent. The school will not make change and envelopes are to be sealed at home.

Rubella vaccine will be \$1.00. All other immunizations will be 50c. Send the registration form for rubella.

Amblyopia Clinic To Be Held

On April 30th 1970

An Amblyopia (Lazy Eye) will be held next Thursday for four and five-year-old pre-school children.

Children develop their vision by using their eyes. This occurs up until the age of seven years. If vision is not developed by then it never will be and a condition of blindness, called amblyopia occurs. This usually affects one eye only but may, in rare instances, affect both eyes.

As vision develops, the child uses both eyes if both are functioning equally well. If one eye causes difficulty, such as double vision, or if one eye is nearsighted or farsighted, or if one eye is crossed, the child will unconsciously "blot out" that eye, resulting in disuse of that eye and a condition of amblyopia in the future. These causes can be corrected and the child aided so that vision may develop in both eyes.

Vision is so important in our social relationships as well as in learning the "3-R's". Please bring your 4 and 5-year-old pre-school child to the County Courthouse on Thursday, April 30 between 9:30 and 11:30 a. m. and let us help you and your child. Free.

REMEMBER, the live virus vaccine (polio, smallpox, red measles or mumps) is to be had one month before or after Rubella vaccine.

Please send a note with parents' signature requesting Rubella vaccine with your school child.

The Health Department encourages those 12 years of age and over to obtain the immunization from their private physician.

Angler Mike Schvaneveldt, Holladay, does part.

Huge trailer courts like these are flushing raw sewage, polluting Strawberry Reservoir, Wasatch health officials say.

Strawberry Pollution Action

By HARRY WIXOM
Environmental Editor

STRAWBERRY R.E.S.R. VOIR — Two camp operators and two officers of the Strawberry Water Users Association have been served with complaints signed by the Wasatch County Board of Health, officials announced today.

The complaints were signed by Dr. Larry Duke, health board chairman, before Justice of the Peace K. N. Durant, Heber City.

The complaints say that operators of two camps, Trout Creek and Strawberry, may continue to operate boating and restaurant facilities, and

may also allow trailers to remain parked at their camps. Camp operators cannot, however, legally continue to provide running water to the trailers.

FLUSH THROUGH

"The greatest single source of pollution in Strawberry is caused by large-scale water services provided to trailer owners, who then flush right on through to the ground and into the reservoir," Duke said.

The two users association officers, Charles Finley and Lawrence Johnson, were served with complaints requiring improvement of

sanitation facilities, including outdoor toilets, around the reservoir, records show.

Duke said the board of health had passed an ordinance just last week to avoid shutting down an entire camp because of failure to comply with sanitation requirements. Under these new ordinances the camp operator can continue to keep boat and restaurant facilities open if they meet separate licensing requirements, Duke said.

Health officials also sent a letter during the week to the State Board of Health outlining sanitation problems at Strawberry. Wasatch health

officials said they will meet with the governor next week to discuss possible solutions.

COUNTY POWER

However, according to state health regulations, counties have the right to serve complaints and, if necessary, close operations which might endanger the general public health.

County health officials said camp operators had been requested last year to submit plans for adequate sewage disposal before opening for the June 6 general trout season. "Many did not, and were allowed extra time to comply, but now it is clear

they do not intend to do anything until forced," officials said.

"Operators waiting for the Central Utah Project (CUP) to come through, changing the lake level and number of area cabins and trailers are waiting in vain. It could take five years for the project to go through, and we are definitely not going to wait for that before cleaning up the sewage problem there," the officials added.

Duke said anglers and recreation-seekers "seem to be more concerned about keeping the shoreline and lake clean," but now it is clear

Strawberry:

free of litter than ever before."

Some Scout groups and individuals carry sacks around the shoreline to pick up debris. They dump the sacks in garbage cans at camps and several points near U.S. 40.

"Day users are taking the lake cleanup seriously," Duke said, "but permanent trailer courts—those hooked up to permanent water supplies from camp operators—are in outright opposition."

County health officials said the Strawberry Water Users Association is collecting money for recreational facilities, "and has an obligation to provide sanitation facilities for the recreationists after they arrive."

Some 15 privies were added this year, "a small improvement—far from adequate," officials emphasized.

"The water users association refused to pay \$250 for enough toilets to take care of the problem," one official said.

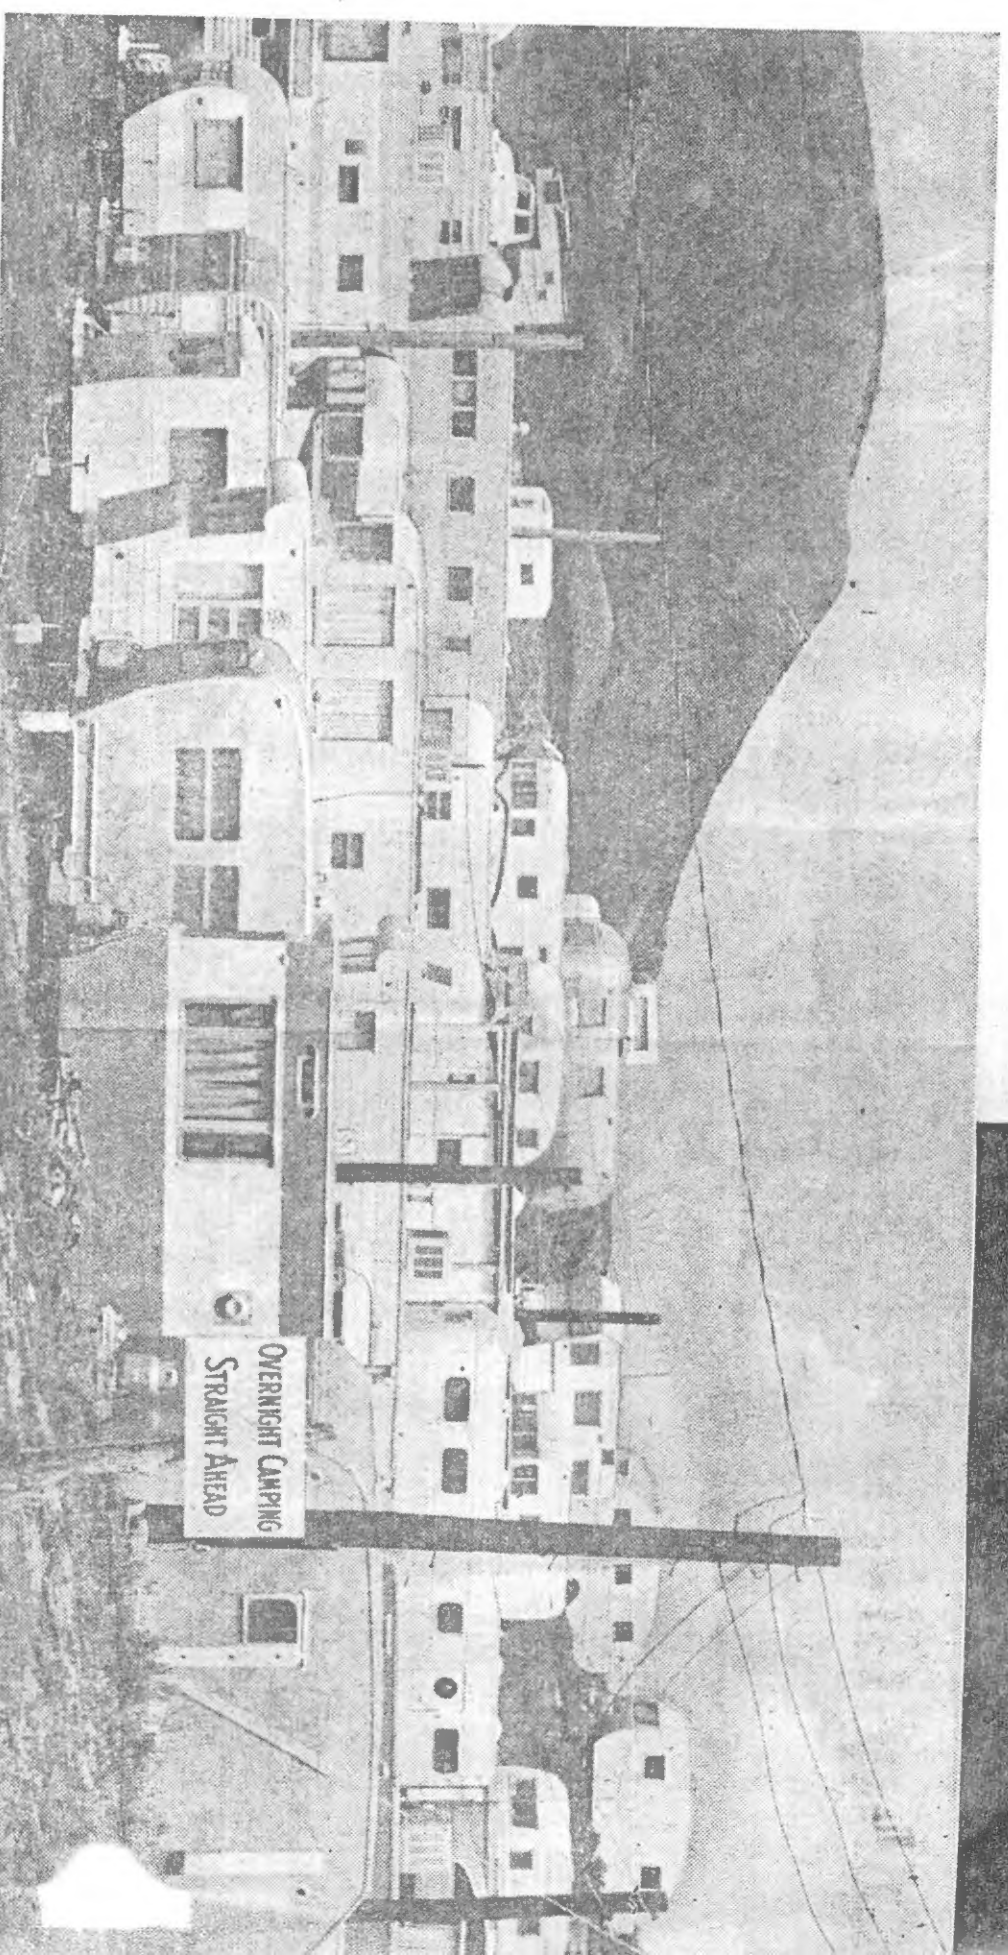

"We all know that pollution is a problem that pollutes across

Water, Trailer Users Deny 'Unsanitary' Claim

By HARTT WIXOM
Environmental Editor

The Strawberry Water Users Association and trailer camp operators, served with summonses earlier this week by the Wasatch County Board of Health, today termed the action "arbitrary and discriminatory."

Health officials said septic tanks at the trailer camps do not meet state health standards. "State standards require tanks with a 750-gallon capacity, much larger than those being used at Strawberry Reservoir," one health official said.

The summonses, served on

two officials of the water users and two trailer camp operators, require court appearance next Saturday. At that time the four face a termination of piped water.

Representatives of the water users and trailer camp operators denied "causing any pollution of the ground area near the reservoir, or the reservoir itself."

"If anyone dumps raw sewage in the Strawberry area he should immediately be closed down by the board of health," representatives said. "We invite the public to come out and inspect our facilities. We will be glad to show that we

are complying with sanitation at Strawberry Valley."

Representatives drew up the following statement, over the signature of Walter E. Durrant, chairman, Strawberry Trailer Owners. Water users said they concur with the statement:

"We feel there are many conditions in Strawberry Valley that have less satisfactory sanitary facilities than the great majority of trailers located in trailer camps at Strawberry.

"We feel that buried sewage is a more desirable condition than open sewage conditions.

"The trailer owners were not notified in advance of in-

stalling their trailers of any specific requirements related to Wasatch County codes.

"We feel we should be allowed reasonable time to comply with a practical plan that is developed, recognizing temporary status of existing facilities in the Strawberry area.

"At no time were any septic tank specifications issued, other than those installed, or was any attempt made by Wasatch County officials to inspect these units for acceptable compliance.

"If codes were in effect years ago, why was not something said at this time? Wasatch County was fully aware

of the trailers being at Strawberry, as attested by the fact that they have assessed and collected personal property taxes on these units.

"We feel we should have the same rights and privileges as other government camp grounds and private camping units and we should not be compelled to conform to any more restrictive requirements than those applicable to these units.

"We therefore request the Wasatch County Board of Health, the County Commission, and the county attorney to set aside any ruling until such time as adequate and uniform arrangements can be

developed that will be applied to all users of Strawberry Valley and other recreational areas within Wasatch County."

Copies of the statement were sent to the county board of health.

In a separate letter to the press, representatives said, "We do not allow litter or garbage to pile up around our camps.

"We are doing our best to make the area a beautiful place to live and visit."

Durrant said it is unfair to expect many large expenditures in the area," since all trailer camps and concessions around the lake will be moved

in some five to seven years because of Strawberry enlargement in the Central Utah Project.

"Nevertheless, we are doing our best to keep the areas clean, installing even more privies than county health officials required.

"We could do more to keep the area clean if Wasatch County would give us greater authority to make arrests for littering or polluting, especially with the many intermittent users.

"Strawberry is a community itself, a large one on weekends and holidays, and yet we may have to go all the way to Heber City to get someone to make an arrest."
